In the Claims:

Please replace all previous claim listings with the following claim listing:

1. (Currently Amended) An integrated data processing system for managing a process of delivery of software products to target software product execution units in a network environment, comprising:
 - a central repository for storing software components of at least one software product;
 - a first sub-system for identifying within the central repository software components of a software product to be delivered;
 - a second sub-system for creating at least one software product package from the identified software components identified by the first sub-system, and
 - a third sub-system for distributing the at least one software product package created by the second sub-system to the target software product execution units; and
 - a fourth sub-system for recording information provided by at least one of the first through third sub-systems of the integrated data processing system during delivery of the software product.
2. (Original) The integrated data processing system according to claim 1, further comprising a software package distribution repository for storing the at least one software product package created by the second sub-system from the identified software components.
3. (Original) The integrated data processing system according to claim 1, in which the third sub-subsystem distributes the at least one software product package to target software product execution units belonging to at least one environment according to at least one role assigned to the at least one software product package by the second sub-system.
4. (Original) The integrated data processing system according to claim 1, in which the first sub-system manages a storage in the central repository of the software components of the software product to be delivered.

5. (Currently Amended) The integrated data processing system according to claim 1, further comprising a ~~fourth~~ fifth sub-system for performing a building process of software code components among the identified software components of the software product to be delivered, the ~~fourth~~ fifth sub-system storing a result of the building process in the central repository.

6. (Currently Amended) The integrated data processing system according to claim 1, further comprising a ~~fifth~~ sixth sub-system for managing a process of applying changes to the at least one software product distributed by the third sub-system.

7-11. (Cancelled)

12. (Previously Presented) A method of developing and installing a software product on a plurality of target computers, the method comprising:

storing a plurality of components in a central repository;
using at least some of the plurality of stored components to build the software product;
storing the built software product in the central repository;
creating an installable software package that includes at least some of the plurality of components and the built software product;
storing the installable software package in a second repository;
distributing the installable software package to at least some of the plurality of target computers; and
installing the distributed installable software package on the at least some of the plurality of target computers.

13. (Previously Presented) The method of Claim 12, wherein the software product comprises a newly developed software product.

14. (Previously Presented) The method of Claim 12, wherein the software product comprises a new release and/or a new version of an already released software product.

15. (Previously Presented) The method of Claim 12, further comprising recording information regarding the software product in a tracking sub-system.

16. (Previously Presented) The method of Claim 12, wherein the built software product comprises execution code that is generated from a source code component stored in the central repository.

17. (Previously Presented) The method of Claim 12, further comprising providing a configuration management subsystem that controls and manages different versions of the software components stored in the central repository.
